Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

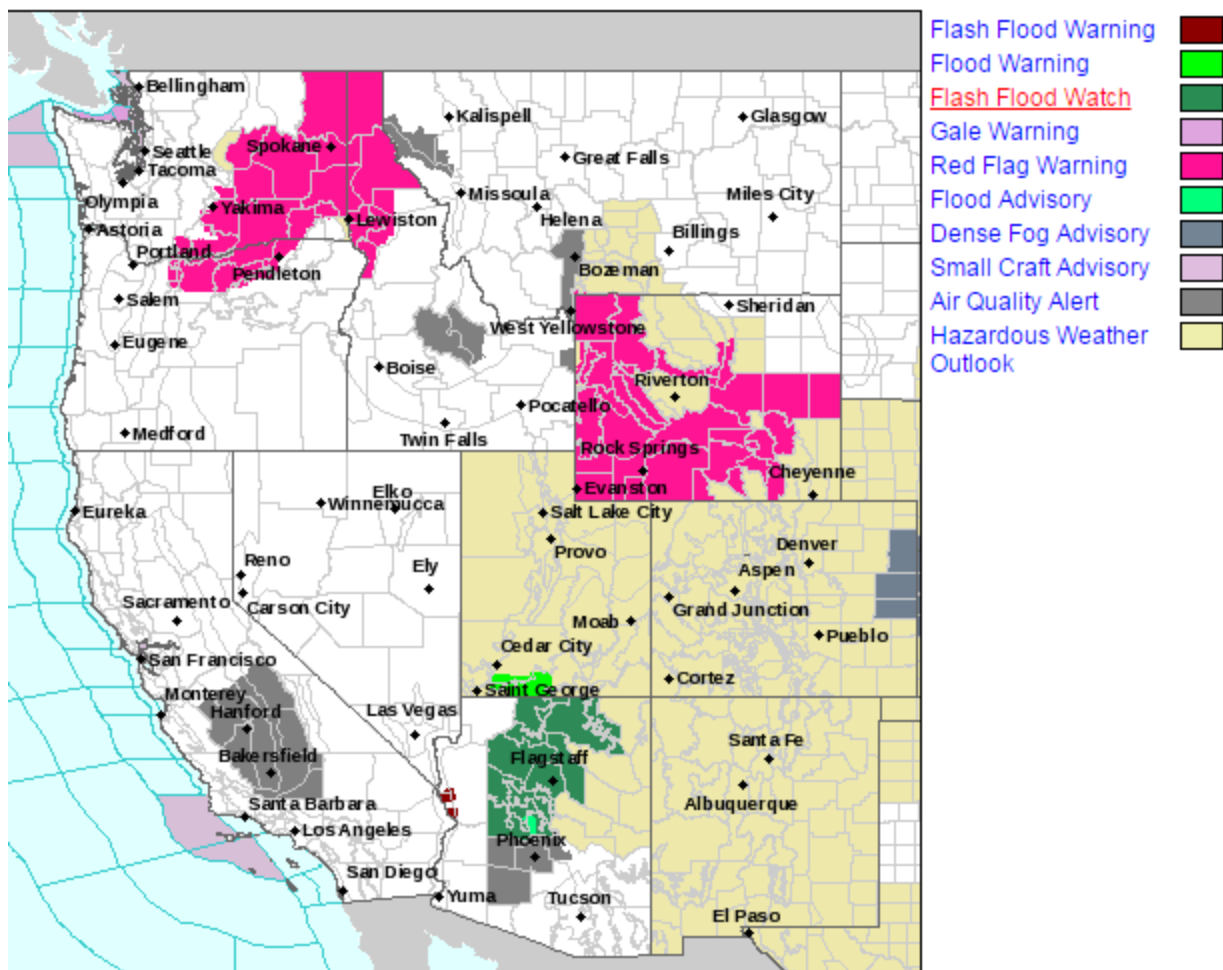

A weak high pressure ridge will be over the region today into Sunday. In general, expect there to be little change in our weather for the next few days. Sunny, dry weather will be in place inland with the marine layer near the coast deep enough for low clouds and patchy fog to persist except for a few afternoon hours each day there. Our warmest inland valleys will be in the 90s for the next few days which is very seasonable. Low afternoon relative humidity (RH) inland and rather poor overnight recovery on the mid and upper slopes in particular (30-40%, locally lower) will also continue for at least a few more days. A low pressure trough will develop off shore Sunday night, and a weak low currently milling around well off shore likely to get caught up in the trough and brought ashore late Monday. Precipitation appears unlikely with this system, but if any does occur, it would be very light and in our far northwest areas. Tuesday the trough will be centered just off shore with any possible showers light and occurring near the Oregon border. The trough moves ashore Wednesday and basically stays over the region through next Friday and will bring in a much cooler airmass with it. Afternoon high temperatures will drop to as much as around 10 degrees below seasonal normals (warmest inland areas in the upper 80s). Isolated thunderstorms with the trough can't be ruled out completely for the far northern areas, but seem rather unlikely at this time. There will be periods of gusty southerly to westerly winds over the higher elevations and in the afternoons east of the Cascade/Sierra crest. The most favorable days for this appear to be Sunday and Monday and then again and stronger at the end of next week. Gusts of 25-35 mph may become fairly common. RH may be higher by then as well, so an increase in Significant Fire potential is not a concern at this time.

SOUTHERN CALIFORNIA

Scattered showers and thunderstorms will continue in and around the Mojave National Preserve through this afternoon as a weak area of low pressure spins near the Colorado River. This low will move into Arizona Sunday ending the thunderstorm threat across the region. There will be little change in temperature and humidity today. Temperatures will be around 5 degrees below normal, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer which is still around 3,000 feet deep. Temperatures will warm 4 to 8 degrees away from the coast both Sunday and Monday as high pressure builds into California from the Pacific Ocean. Minimum humidity will drop mainly into the upper single digits and teens above the marine layer which will shrink through Monday. Temperatures will cool across the area and the marine layer will deepen across the coastal areas Tuesday through the end of next week as a Pacific trough drops south along the West Coast. This trough will also bring south to west winds of 15 to 30 mph with gusts to 50 mph to the mountain ridges and desert passes Tuesday afternoon through the end of next week.
